VENKATESAN S

Front End Developer

✉ venkatesansakthivel.s@gmail.com   ☎ 6369897911

I'm really good at keeping things in order, coming up with new ideas, and finding solutions. I'm skilled at making plans, looking at details, and making choices, and I'm great at achieving the things I set out to do, even when I have limited time. I can grasp new information quickly and deal with complicated ideas. I work well with others as part of a team, but I can also work by myself when needed. I'm good at thinking logically and can break things down and put them back together effectively.

Skills

Languages
- HTML
- CSS
- Bootstrap
- Tailwind
- Progressive Web App(PWA)

Libraries
- React JS
- Redux
- Redux-Saga

- Knowledge of cloud (Azure, AWS)

Frameworks
- Angular 6
- Next JS

Experience

- Associate Software Engineer
  Desuvit technologies private limited.
  Duration: February 2022 – Present **(1 YEARS 10 MONTHS)**

- Front End Developer (INTERNSHIP)
  Veave Technologies Pvt. Ltd, India
  June-2021-Dec-2021 **(6 MONTHS)**

PROJECTS

1 . Project Title : TransportDoc

Description: TransportDoc is a logistic and transportation system with two components: a mobile app featuring a ReactJS webview hosted within it, used by drivers to record working hours, break times, and locations, and an admin portal built in ReactJS. The portal integrates with third-party APIs to sync user data and calculate daily wages based on driving hours.

Technology used : HTML, CSS, JavaScript, Bootstrap, React, Redux, Ant Design.

Responsibilities:

1. I have developed UI based on Figma designs and reference provided by the client, like login page, Register page, Ant Design package, popup Modals, Calendars, Forms, added authentication and authorization provided routing Engaged in continuous learning while exploring new concepts within our project
2. Hands-on manual testing of features
3. Researching third-party packages to enhance client project functionality.

2 .Project Title : Campaigner

Description: Campaigner is a web-based application designed to assist businesses in managing their email marketing campaigns effectively. The platform leverages a variety of technologies to provide a seamless and user-friendly experience.

Technology used: HTML, CSS, JavaScript, Bootstrap, Chakra UI, React, Redux.

Responsibilities:
1. Developed the login and registration pages to ensure secure access to the application, handling user authentication and authorization.
2. Included designing and implementing the email inbox and email template management functionalities, streamlining the process of viewing received emails and accessing email templates.
3. Integrated Chakra UI to maintain a consistent and modern design throughout the application, enhancing the overall user experience.
4. Implemented features like row editing and reordering, email format changes, user profile editing, and password changes, giving users greater control over their email campaigns and account settings.

3. Project Title : ChatGPT Chrome Extension

Description: I designed and developed a browser extension using HTML, CSS, and JavaScript to enhance the user experience for ChatGPT users. The extension was designed to provide users with features such as chat history management, PDF chat export, and the ability to add chats to a favorites list.

Technology used: HTML, CSS, JavaScript.

Responsibilities:
1. Designed and integrated a system that enables users to add chats to a favorites list. Users can easily mark and unmark their favorite conversations
2. Incorporated a feature that allows users to export their complete chat history to a PDF document. This involved integrating third-party packages.
